

JESSE DANIEL TORRES

Automation Engineer | Airtable Solutions | API Integrations

Los Angeles, CA

GitHub: <https://github.com/jtorres-1>

SUMMARY

Automation-focused Software Engineer with hands-on experience designing, optimizing, and maintaining **Airtable-based internal tools**, automations, and API integrations. Proven ability to translate business requirements into scalable low-code and scripted solutions used by internal teams. Strong background in backend development, workflow automation, and system integrations, with experience supporting Agile environments, documentation, and operational handoff.

CORE SKILLS

- Airtable (bases, formulas, automations, interfaces, scripting)
 - Workflow automation and internal tooling
 - API integrations (REST, webhooks)
 - JavaScript, Python
 - Data modeling and clean architecture
 - Low-code / no-code platforms
 - Backend automation systems
 - Agile / Scrum collaboration
 - Documentation and knowledge transfer
-

PROFESSIONAL EXPERIENCE

Automation Engineer / Software Engineer

SlateAI

2024 – Present

- Designed and maintained **Airtable-based internal tools** supporting QA workflows and operational tracking
- Built and optimized **Airtable automations and scripts** to reduce manual data handling and improve reliability

- Integrated Airtable with Slack and backend services via APIs and webhooks
 - Translated evolving business requirements into scalable Airtable data structures and workflows
 - Troubleshot performance and usability issues across existing Airtable bases
 - Documented system architecture, automations, and integration logic for internal handoff and maintenance
-

Automation & Backend Developer

Loopstack Agency

2023 – 2024

- Built **production-ready Airtable solutions** for internal and client-facing operations
 - Designed Airtable bases, interfaces, and automations to support operational workflows
 - Implemented API integrations connecting Airtable with Stripe, Calendly, email systems, and external services
 - Developed custom scripts and automation pipelines to sync data across systems
 - Collaborated directly with stakeholders to refine requirements and deliver maintainable solutions
 - Provided documentation and training to ensure long-term usability and scalability
-

Independent Automation Developer

Freelance / Contract

2022 – Present

- Delivered custom automation systems for clients using Airtable, APIs, and backend scripts
 - Built internal dashboards, data pipelines, and automation workflows to eliminate repetitive manual work
 - Designed clean data architectures with an emphasis on maintainability and performance
 - Scoped projects, delivered fixed-price builds, and provided post-delivery support and documentation
-

TECHNICAL PROJECTS

CombatIQ

- Internal analytics and automation platform integrating multiple data sources
- Backend automation, API orchestration, and workflow optimization
- Emphasis on clean architecture and operational reliability

Client Magnet

- Automation system for lead discovery, filtering, and outreach
 - Data ingestion, processing pipelines, and system automation
-

EDUCATION

Computer Science

Southwest College 2020-2023

CSUN 2023-2025

ADDITIONAL NOTES

- Experienced working with internal stakeholders and cross-functional teams
- Comfortable owning systems end-to-end, from configuration to documentation
- Strong communicator with a focus on outcomes, maintainability, and scalability
